

# Service Manual

ORDER NO.  
RRV1122

The chapter 1 of this Service Manual will not be reprinted. On your additional orders, we may supply only the chapter 2. For the chapter 1, please make copies and attach to the chapter 2 at your side if necessary.

FILE TYPE CD PLAYER

## PD-P840F PD-F51

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

| Type  | Model    |        | Power Requirement     | The voltage can be converted by the following method. |
|-------|----------|--------|-----------------------|---|
|       | PD-P840F | PD-F51 |                       |   |
| KUC   | ○        | —      | AC 120V               | —   |
| KU/CA | —        | ○      | AC 120V               | —   |
| RD    | ○        | —      | AC 110-127V/220V-240V | With the voltage selector                             |
| WB    | ○        | —      | AC 220-240V           | —   |
| WEM   | ○        | —      | AC 220-240V           | —   |

- This product is a system(s) component. (For PD-P840F)

PD-P840F is functioned independently. When perform the system operation ; to avoid malfunctions, be sure to connect it to the prescribed system component(s), otherwise damage may result.

This product's instructions are contained within the instruction manual of the related system component(s).

The manual is packed with those component(s).

## CHAPTER 1

### 1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

#### WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

#### NOTICE

##### (FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

#### REMARQUE

##### (POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

#### (FOR USA MODEL ONLY)

##### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

##### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed, metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

##### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

LASER PRODUCT**

VRW-328

**WEM and WB types**

**Additional Laser Caution**

**1. Laser Interlock Mechanism**

The position of the switch [leaf switch (VSK1011) on the **LOADING BOARD ASSY**] for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch is not on CLMP terminal side (CLMP signal is OFF or high level). Thus, the interlock will no longer function if the switch is deliberately set to CLMP terminal side. (low level) The interlock also does not function in the test mode \*. Laser diode oscillation will continue, if pin 1 of M51593FP ( IC101 ) on the **PRE - AMP BOARD ASSY** mounted on the **PICKUP ASSY** is connected to GND, or pin 19 is connected to low level ( ON ), or else the terminals of Q101 are shorted to each other ( fault condition ).

**2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.**

\* : Refer to page 1 - 10.

## **2. SPECIFICATIONS**

### **1. General**

|                             |   |

|-----------------------------|
| Audio line output           |
| Control input/output jacks  |
| CD-DECK SYNCHRO jack        |
| I/O INTERFACE (PD-F51 ONLY) |

### **4. Functions**

Number of discs to be stored - maximum 50+1.

#### Basic Operation Buttons

- PLAY, PAUSE, STOP

#### Playback mode

- PLUS 1 playback mode
- All Playback Mode
- Single Playback Mode
- Custom Playback Mode

#### Search Function

- Disc Search
- Track Search
- Manual Search

#### Programming

- Maximum 32 steps
- Pause
- Program Clear (single track or all tracks)

#### Repeat Functions

- 1 Track Repeat
- Single Repeat
- All Discs Repeat
- Program Repeat
- Single Random Repeat
- All Discs Random Repeat
- Custom Random Repeat
- Custom Repeat

#### Random Play

- Random Play (repeat also available)

#### Switching Display

Disc/Track Number, Time Consumed (track/disc), and Total Time

#### ADLC

Automatic Digital Level Controller

#### Memory Hold

Stored Playback Mode, Program Contents, or Custom Mode

#### Last Disc Memory

Direct Search with the Digit buttons (remote control unit)

Power On/Off (remote control unit)

CD-DECK SYNCHRO jack

Remote Control jack

### **5. Display**

FL Tube Display

- Play indicator
- Pause indicator
- Playback Mode indicators (all, single, custom)
- Elapsed Time Display (min, sec)
- Total Time Display
- Disc Number, Track Number
- Program Step Number
- Custom Number
- Repeat indicator
- Random indicator
- Program indicator
- ADLC indicator

### **6. Accessories (PD-F51 ONLY)**

|  |   |
|--|---|
| ● Remote control unit .....                | 1 |
| ● AAA/R03 dry cell batteries .....         | 2 |
| ● Output cable .....                       | 1 |
| ● Control cable .....                      | 1 |
| ● CD liner notes file .....                | 1 |
| ● Index label sheet .....                  | 1 |
| ● Electrostatic charge removal sheet ..... | 1 |
| ● Operating instructions .....             | 1 |

#### **NOTE:**

Specifications and design subject to possible modification without notice, due to improvements.

### 3. PANEL FACILITIES

#### FRONT PANEL

- ① POWER STANDBY/ON switch
- ② EJECT button (▲)
- ③ Plus 1 disc indicator (DISC SET NO. 0)
- ④ PLUS 1 slot
- ⑤ Remote sensor  
Receives the signal from the remote control unit.
- ⑥ TIME button
- ⑦ ADLC button
- ⑧ DISC NUMBER buttons (-/+)
- ⑨ Track/Manual search buttons (◀◀◀◀ / ▶▶▶▶)
- ⑩ Stop button (■)
- ⑪ Play/Pause button (▶/II)
- ⑫ MODE button
- ⑬ CLEAR button
- ⑭ RANDOM button
- ⑮ STANDBY indicator
- ⑯ Rolling RACK 1
- ⑰ Rolling RACK 2
- ⑱ EJECT button for RACK 1 (▲)
- ⑲ EJECT button for RACK 2 (▲)

#### REMOTE CONTROL UNIT (PD-F51 ONLY)

Remote control buttons with the same names or marks as buttons on the front panel of the player control the same operations as the corresponding front panel buttons.

- ① POWER button
- ② PGM button
- ③ MODE button
- ④ Stop button (■)
- ⑤ Digit buttons (0 - 9)
- ⑥ REPEAT button
- ⑦ RANDOM button
- ⑧ DISC buttons (-/+)
- ⑨ Track search buttons (◀◀◀◀ / ▶▶▶▶)
- ⑩ Pause button (II)
- ⑪ Play button (▶)
- ⑫ TRACK SET button
- ⑬ DISC SET button

## 4. OPERATING DESCRIPTION

### 1. Power Supply Receptacle ON

When the mechanism is not at the home position when the power supply receptacle is switched ON, it will return to the home position, the mechanism will be returned and stop will be executed with the following display.

The normal play mode will be <ALL> mode when no mode specification has been made.

Receptacle ON (DISC Display)

For these models, any disc in the slot-in part will be ejected. However, the disc will be loaded if it is in an intermediate position.

When a disc is in the ejection completion position and the mechanism is not at the home position, the disc will be pulled in and the mechanism will return to the home position.

### 2. POWER ON/OFF (main unit and remote control)

#### 2.1 POWER OFF

1. When the POWER key is pressed at the time of POWER ON, the entire FL will go out, the standby LED will light, and power OFF condition will be reached.
2. Except for the POWER key and the ▲ (+1EJECT) key, all other keys are disabled during POWER OFF.
3. When the POWER key is pressed during play, during search, etc., the operation will be stopped, the +1 disc will clamp when there is a disc in the slot-in part, and when there is no disc in the slot-in part, the power will be switched OFF at the home position in return condition.

At this time, "OFF" is displayed at the 7-segment display to indicate that POWER OFF is being executed.

During POWER OFF

4. The play mode, the program, the customer, and the last disc are kept even when POWER OFF is executed.

#### 2.2 POWER ON

1. When the POWER key is pressed at the time of POWER OFF, the FL will light, the standby LED will go out, and all keys will be enabled.
2. When a +1 disc is slotted in at the time of POWER OFF, POWER ON will be executed and the disc will be pulled in.
3. The disc No. at the time of POWER OFF will be displayed, and when then the ▶ / II (PLAY/PAUSE) key is pressed, that disc will be searched and played.  
(Last Disc Memory specifications)
4. When the ▶◀ · ▶◀ (TRACK BACK) key is pressed within 1 sec after POWER ON, the business demonstration display will be started. When a key is pressed or the door is opened, the demonstration will stop and return will be made to the original display.

### 3. Door and Rolling Rack Open

1. As play operation is continued even when the door is opened, disc exchange is possible even during playback, but as the rolling rack with the mechanism behind it can not be tilted, the discs in that rack can not be exchanged.
2. While the door is open, the number of the rolling rack which can not be tilted is displayed on the 7-segment display. (Only "RACK" is displayed when all racks can be tilted.)

With open door

(The number of the rack which can be tilted is shown.)

3. When the door is opened during selection or loading, the operation will be interrupted temporarily. The operation will be started again after confirmation that the door has been closed.

Accordingly, when the ▶ / II (PLAY/PAUSE) key or the RANDOM key is pressed while the door and the rolling rack is open, play operation will not begin. Play will be started after confirmation that the door has been closed.

4. When a rolling rack is tilted, the disc existence information for that part, the program write information, and the random erasure information are cleared.  
(The customer writing information is not cleared.)  
When at this time all written information is cleared in <PROGRAM> mode, <ALL> mode will be entered.

#### **4. PLAY/PAUSE (main unit)**

1. When the ▶ / || (PLAY/PAUSE) key is pressed during STOP, play will be started for PLAY key.  
When the ▶ / || (PLAY/PAUSE) key is pressed during normal, random and program play operations, Play and Pause will be changed for PAUSE key.
2. When the ▶ / || (PLAY/PAUSE) key is pressed during program is engaged in the normal play, program play will be started. (It is not operation for PAUSE key.)

#### **5. STOP (Last Disc Memory specification) (main unit and remote control)**

1. When the ■ (STOP) key is pressed during play, the number of the disc played immediately before will be displayed, the +1 disc will be clamped when there is a disc in the slot-in part, and when there is no disc in the slot-in part, stop will be executed at the home position in return condition.
2. When the ▶ / || (PLAY/PAUSE) key is pressed again, the previously played disc will be searched and played (Last Disc Memory).  
When a program has been set up, the number of the first disc in the program will be displayed, and when then the ▶ / || (PLAY/PAUSE) key is pressed, play will start from that disc.

■ (STOP) key ON

(The number of the disc played immediately before is shown.)

■ (STOP) key ON (with a program)

(the number of the first of the program is shown.)

3. Last Disc Memory applies for all modes, <ALL>, <SINGLE>, and <CUSTOM>. (However, this applies only for normal play.)
4. When the ■ (STOP) key is pressed during repeat or pause ON, repeat or pause also will be cancelled.  
When the ■ (STOP) key is pressed during stop in <PROGRAM> mode, <PROGRAM> mode will be cancelled (when a program has been written, this also will be cleared), and <ALL> mode will be entered.

## 6. ADJUSTMENTS

### 6.1 Adjustment Methods

If a disc player is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

#### ● Adjustment Items/Verification Items and Order

If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in steps 1 – 4, the pickup block may be defective.

| Step | Item   | Test Point                                  | Adjustment Location   |
|------|--|---|---|
| 1    | Focus offset verification                          | TP1, Pin 6(FCS. ERR)                        | None  |
| 2    | Tracking error balance verification                | TP1, Pin 2(TRK. ERR)                        | None  |
| 3    | Pickup radial/tangential direction tilt adjustment | TP1, Pin 1(RF)                              | Radial tilt adjustment screw,<br>Tangential tilt adjustment screw |
| 4    | RF level verification                              | TP1, Pin 1(RF)                              | None  |
| 5    | Focus servo loop gain adjustment                   | TP1, Pin 5(FCS. IN)<br>TP1, Pin 6(FCS. ERR) | VR152(FCS. GAN)   |
| 6    | Tracking servo loop gain adjustment                | TP1, Pin 3(TRK. IN)<br>TP1, Pin 2(TRK. ERR) | VR151(TRK. GAN)   |

#### ● Abbreviation table

|          |                 |
|----------|-----------------|
| FCS. ERR | :Focus Error    |
| TRK. ERR | :Tracking Error |
| FCS GAN  | :Focus Gain     |
| TRK GAN  | :Tracking Gain  |
| FCS. IN  | :Focus In       |
| TRK. IN  | :Tracking In    |

#### ● Measuring Instruments and Tools

1. Dual trace oscilloscope (10:1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS-7)
4. Low pass filter ( $39k\Omega + 0.001 \mu F$ )
5. Resistor ( $100 k\Omega$ )
6. 8cm disc (With at least about 20 minutes recording)
7. Standard tools

### ● Test Point and Adjustment Variable Resistor Positions

MAIN BOARD ASSY

Figure 1. Adjustment Locations

### ● Notes

1. Use a 10:1 probe for the oscilloscope.
2. All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10:1 probe is used.

### ● Test Mode

These models have a test mode so that the adjustments and checks required for service can be carried out easily. When these models are in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For these models, all adjustments are carried out in test mode.

#### [Setting these models to test mode]

How to set this model into test mode.

1. Unplug the power cord from the AC socket.
2. Press the TEST mode switch (S301). (See Figure 1.)
3. Plug the power cord back into the AC socket.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1 – 3.

**[Release from Test Mode]**

Here is the procedure for releasing the test mode:

1. Press the STOP key and stop all operations.
2. Unplug the power cord from the AC socket.

**[Operations of the keys in test mode]**

| <b>Code</b> | <b>Key Name</b> | <b>Function In Test Mode</b>                  | <b>Explanation</b>  |
|-------------|-----------------|---|---|
|             | MODE            | Closes focus servo after the disc is clamped. | <p>After the first disc is clamped, the laser diode is lit up and the focus actuator is lifted up, then lowered slowly and the focus servo is closed at the point where the objective lens is focused on the disc.</p> <p>With the player in this state, if you lightly rotate the stopped disc by hand, you can hear the sound the focus servo.</p> <p>If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus actuator is pulled up, then the actuator is lowered and raised three times and returned to its original position.</p>  |
| ▷ / II      | PLAY/PAUSE      | Spindle servo ON                              | <p>Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500 rpm at the inner periphery), sets the spindle servo in a closed loop.</p> <p>Be careful. Pressing this key when there is no disc mounted makes the spindle motor run at the maximum speed.</p> <p>If the focus servo does not go correctly into a closed loop or the laser light shines on the mirror section at the outermost periphery of the disc, the same symptom occurs.</p>  |
|             |                 | Tracking servo close/open                     | <p>Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel, and outputs the playback signal.</p> <p>If the elapsed time is not displayed or not counted correctly or the audio is not played back correctly, it may be that the laser is shining on the section with no sound recorded at the outer edge of the disc, that something is out of adjustment, or that there is some other problem.</p> <p>This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.</p> |

| Code    | Key Name                           | Function in Test Mode          | Explanation  |
|---------|------------------------------------|--------------------------------|--|
| ◀◀ . ▶▶ | TRACK /<br>MANUAL<br>SEARCH<br>REV | Carriage reverse<br>(inwards)  | Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation. |
| ▶▶ . □□ | TRACK /<br>MANUAL<br>SEARCH<br>FWD | Carriage forward<br>(outwards) | Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation. |
| □□      | STOP                               | Stop                           | Initializes and the disc rotation stops.<br>At this time, return the disc to the rack and the mechanism back to its original position.   |

Note : When the first disc in the test mode. (Other discs cannot be selected.)

### [How to play back a disc in test mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.

Here is the key operation sequence for playing back a disc in test mode.

Wait at least 2-3 seconds between each of these operations.

## 1. Focus Offset Verification

|  |   |   |  |
|--|---|---|--|
| ● Objective  | Verify the DC offset for the focus error amp.           |   |  |
| ● Symptom when out of adjustment                                 | The model does not focus in and the RF signal is dirty. |   |  |
| ● Measurement instrument connections                             | Connect the oscilloscope to TP1, Pin 6 (FCS. ERR)       | ● Player state<br>● Adjustment location<br>● Disc | Test mode, stopped (just the Power switch on)<br>None<br>None needed |
| <b>[Procedure]</b>   |   |   |  |
| Verify the DC voltage at TP1, Pin 6 (FCS. ERR) is $0 \pm 50$ mV. |   |   |  |

Note : If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in adjustment items 1 – 4, the pickup block may be defective.

## 2. Tracking Error Balance Verification

|                                      |   |   |  |
|--------------------------------------|---|---|--|
| ● Objective                          | To verify that there is no variation in the sensitivity of the tracking photo diode.  |   |  |
| ● Symptom when out of adjustment     | Play does not start or track search is impossible.  |   |  |
| ● Measurement instrument connections | Connect the oscilloscope to TP1, Pin 2 (TRK. ERR). This connection may be via a low pass filter.<br><br>[Settings] 50 mV/division<br>5 ms/division<br>DC mode | ● Player state<br>● Adjustment location<br>● Disc | Test mode, focus and spindle servos closed and tracking servo open<br>None<br>YEDS-7 |
| <b>[Procedure]</b>                   |   |   |  |

1. Move the pickup to midway across the disc ( $R=35$  mm) with the TRACK/MANUAL SEARCH FWD  $\gg$  •  $\gg$  or REV  $\ll$  •  $\ll$  key.
2. Press the MODE key, then the PLAY/PAUSE  $\triangleright$  /  $\parallel$  key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin 2 (TRK. ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

$$\text{When } A \geq B, \frac{A-B}{C} \times \frac{1}{2} \leq 0.1$$

$$\text{When } A < B, \frac{B-A}{C} \times \frac{1}{2} \leq 0.1$$

### 3. Pickup Radial/Tangential Tilt Adjustment

|                                      |   |   |   |
|--------------------------------------|---|---|---|
| ● Objective                          | To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals. |   |   |
| ● Symptom when out of adjustment     | Sound broken; some discs can be played but not others.  |   |   |
| ● Measurement instrument connections | <p>Connect the oscilloscope to TP1, Pin 1 (RF).</p> <p>[Settings] 20 mV/division<br/>200 ns/division<br/>AC mode</p>  | <ul style="list-style-type: none"> <li>● Player state</li> <li>● Adjustment location</li> <li>● Disc</li> </ul> | <p>Test mode, play</p> <p>Pickup radial tilt adjustment screw and tangential tilt adjustment screw</p> <p>8 cm disc<br/>(With a least about 20 minutes recording)</p> |

#### [Procedure]

1. Press the TRACK/MANUAL SEARCH FWD  $\gg$  •  $\gg$  or REV | $\ll$  •  $\ll$  key to move the pickup to the external circumference of the disc.
2. Press the MODE key, the PLAY/PAUSE  $\triangleright$  /  $\square$  key twice in that order to close the respective servos and put the player into play mode.
3. First, adjust the radial tilt adjustment screw with the Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
4. Next, adjust the tangential tilt adjustment screw with the Phillips screwdriver so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly (Figure 3).
5. Adjust the radial tilt adjustment screw and the tangential tilt adjustment screw again so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
6. When the adjustment is completed, lock the radial and tangential adjustment screw.

Note : Radial and tangential mean the directions relative to the disc shown in Figure 2.

## 6. Tracking Servo Loop Gain Adjustment

|                                      |   |   |   |
|--------------------------------------|---|---|---|
| ● Objective                          | To optimize the tracking servo loop gain.   |   |   |
| ● Symptom when out of adjustment     | Playback does not start, during searches the actuator is noisy, or tracks are skipped.                      |   |   |
| ● Measurement instrument connections | See Figure 5.<br>[Settings]<br>CH1                    CH2<br>50 mV/division    20 mV/division<br>X - Y mode | ● Player state<br>● Adjustment location<br>● Disc | Test mode, play<br>VR151 (TRK. GAN)<br>YEDS-7 |

### [Procedure]

1. Set the AF generator output to 1.2 kHz and 2 Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD  $\triangleright\triangleright$  or REV  $\triangleleft\triangleleft$  key to move the pickup to halfway across the disc (R=35 mm), then press the MODE key, the PLAY/PAUSE  $\triangleright/\square$  key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR151 (TRK. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

## 7. PARTS LIST FOR EXPLODED VIEWS AND PACKING

### NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "◎" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

## 5. Focus Servo Loop Gain Adjustment

|                                      |  |   |   |
|--------------------------------------|--|---|---|
| ● Objective                          | To optimize the focus servo loop gain.   |   |   |
| ● Symptom when out of adjustment     | Playback does not start or focus actuator noisy.   |   |   |
| ● Measurement instrument connections | See figure 4.<br>[Settings]<br>CH1                    CH2<br>20 mV/division    5 mV/division<br>X-Y mode | ● Player state<br>● Adjustment location<br>● Disc | Test mode, play<br>VR152 (FCS. GAN)<br>YEDS-7 |

### [Procedure]

1. Set the AF generator output to 1.2 kHz and 1 Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD  $\gg\gg$  or REV  $\ll\ll$  key to move the pickup to halfway across the disc ( $R=35$  mm), then press the MODE key, the PLAY/PAUSE  $\triangleright/\square\square$  key twice in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR152 (FCS. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

## 8. PCB PARTS LIST

### NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "◎" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits(any digit apart from 0), such as 560 ohm and 47k ohm(tolerance is shown by J=5%, and K=10%).

|              |  |                 |
|--------------|--|-----------------|
| 560 $\Omega$ | $\rightarrow 56 \times 10^1 \rightarrow 561$ | RD1/8PM 5 6 1 J |
| 47k $\Omega$ | $\rightarrow 47 \times 10^3 \rightarrow 473$ | RD1/4PS 4 7 3 J |
| 0.5 $\Omega$ | $\rightarrow 0R5$                            | RN2H 0 0 5 K    |

• How to install the disc table

- 1 Use nipper or other tool to cut the three sections marked Ⓐ figure ①. Then remove the spacer.
- 2 While supporting the spindle motor shaft with the stopper, put spacer on top of the motor base (angled so it doesn't touch section ⑥), and stick the disc table on top (takes about 9kg pressure). Take off the spacer.

## 2. SCHEMATIC AND PCB CONNECTION DIAGRAMS

### 1. MECH BOARD, LOADING MOTOR BOARD, LOADING BOARD, MECHANISM BOARD, PICKUP, SENSOR BOARD AND SELECT MOTOR BOARD ASSEMBLIES

#### NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

1. When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".

2. Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:  
Unit:  $k\Omega$ ,  $M\Omega$ , or  $\Omega$  unless otherwise noted.  
Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.  
Tolerance: (F):  $\pm 1\%$ , (G):  $\pm 2\%$ , (K):  $\pm 10\%$ , (M):  $\pm 20\%$  or  $\pm 5\%$  unless otherwise noted.

4. CAPACITORS:  
Unit:  $pF$  or  $\mu F$  unless otherwise noted.  
Ratings: capacitor ( $\mu F$ ) / voltage (V) unless otherwise noted.  
Rated voltage: 50V except for electrolytic capacitors.

5. COILS:  
Unit:  $mH$  or  $\mu H$  unless otherwise noted.

6. VOLTAGE AND CURRENT:  
□ or  $\leftarrow V$ : DC voltage (V) in PLAY mode unless otherwise noted.  
 $\leftarrow mA$  or  $\leftarrow mA$ : DC current in PLAY mode unless otherwise noted.  
Value in ( ) is DC current in STOP mode.

7. OTHERS:  
•  $\odot$  or  $\ominus$ : Adjusting point.  
•  $\blacktriangleleft$ : Measurement point.  
• The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. SCH - □ ON THE SCHEMATIC DIAGRAM:  
• SCH - □ indicates the drawing number of the schematic diagram.  
(SCH stands for schematic diagram.)

#### 9. SWITCHES (Underline indicates switch position):

## WAVEFORMS

Note: The encircled numbers denote measuring points in the schematic diagram.

\*1 50T-JUMP: After switching to the pause mode, press the manual search key.

\*2 FOCUS-IN: Press the key without loading a disc.

**PD - P840F,  
PD - F51**

Note : All voltages are measured in play mode (DISC 1 PLAY).  
Disc is exist in the slot-in part.

**IC203  
(LA6517)**

| Pin No. | Voltage (V) |
|---------|-------------|
| 1       | 0           |
| 2       | 8.3         |
| 3       | 0           |
| 4       | -8.7        |
| 5       | 0           |
| 6       | 0           |
| 7       | 0           |
| 8       | 0           |

PCB-3

• This diagram is viewed from the pink colored foil side.  
• This PCB is double sided.

• R388-R390, R398 and R399 are not indicated on the schematic diagram because of those are 0 Ω chip resistors.
